

BAHR ELEVATOR

*New solution for barrier-free living
with the positioning system GG 90*

OVERCOMING BARRIERS AND HEIGHT DIFFERENCES

Whether the reasons are accident, illness or age: sometimes you may be limited in your mobility sooner than you would ever have expected, and especially in such a situation you will not want to do without your familiar life in your own house.

Our positioning system GG 90 has now been developed further into the special lift system GG 90 with loading ramp, which can help to make life a lot easier for elderly people or people with physical limitations. If required, the lift can be assembled directly on site and flexibly adapted to the local situation. The lift system can also be installed in rented apartments without any problem. When the lift is no longer needed, it can be dismantled as quickly as it is mounted, due to its sophisticated design.

The desired comfort is ensured by the control unit, which enables soft starts and stops of the lift and thus also protects the mechanical parts from damages.

In addition to the dead man's operation and the soft start mechanism, the control unit has a lot of other functions. It is possible to set the speed parameters and the acceleration ramp.

Options such as a safety release of the system through a closed door or even the complete control of the lift via a house bus system are possible.

Optionally, an additional wireless controller can be implemented subsequently, if you want to operate the lift with wireless transfer.

TECHNICAL SPECIFICATIONS

Length:	1215 mm
Width:	1220 mm
Height:	2230 mm
Weight:	ca. 120 kg
Output speed:	112 min-1
Output torque:	35 Nm
Protection class:	IP54

We are not only flexible with regard to height, but also regarding additional features.

Thus, we also offer our **LIFT-BAHR FOLDING SEAT**. If you do not have to rely on a wheelchair and use a walking frame to get around, or if you are no longer able to manage stairs, we have the solution for you.

*We can help you.
Easily and safely.*
